

9. Preparation Plan

- Research the pulley systems again.
- Test sensors.
- Test Motors.
- Make a prototype.
- Follow ALL Deadlines.

10. Final Takeaway

The most important thing I need to remember is that my project should be a complete and reliable system. All parts should work together and have a purpose. The rubric gives points for integration, repeatability, research, effort, safety, and construction quality, if I follow it all I will get a good grade.

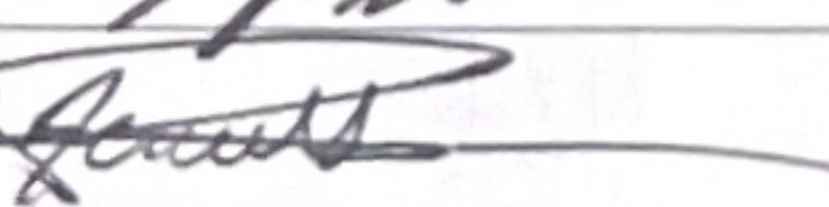

Assistance Acknowledgement

I asked Justin Marsalek if my ideas made sense and he gave me feedback.
